## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5, 7-10, 13-20, 22-34, 36-38, 40-44, 46-52, and 54-58 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Griffith et al. (Griffith; US 6,272,347 B1; cited and applied for the first time).

The entire patent to Griffith is directed to the claimed method and system for automatic call distribution based on location information for call center agents in conjunction with the skill level of the agents and the location of the resources. The limitations of claims 3 and 32 are plainly taught at column 3, lines 20 – 43. The claimed GPS and RFID are taught at column 5, lines 11 – 26. The limitations of claims 9, 16, 37, 40, 52, 54, and 58 are taught at column 3, lines 37 and 38; and lines 58 - 63. The limitations of claims 23, 24, 47, 48, and 56 are taught at column 3, line 64 – column 4, line 5. The claimed limitations regarding reports read on step 809.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 6, 21, 35, and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Griffith as applied above.

IP telephony is ubiquitous in the present state of the art. Thus, lacking criticality, communication devices comprising IP telephones would only have been a matter of design choice since Griffith already teaches communication devices.

***Allowable Subject Matter***

7. Claims 11, 12, 39, and 53 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dezonno et al. (US 6,816,733 B1) teach tracking agent call processing locations in connection with an ACD system. Mani (US 7,031,447 B2) teaches a system and method for location-based call distribution.
